Field Solutions Guide

CELLEBRITE
FIELD SOLUTIONS

The digital devices of today record and store a wealth of data that may contain valuable evidence. First responders need a way to gather consent-based data from these devices at the scene, and upload it to a central repository where it can be securely accessed for further analysis.

The Challenge

Capture digital evidence in the field before it is lost.

- Collect real-time evidence from witnesses and victims in the field while protecting their privacy
- Share actionable insights directly from the field with the investigative team
- Retain data integrity to safeguard evidence admissibility

The Solution

Cellebrite Field Solutions are a comprehensive suite of tools that empower frontline officers and investigators to capture consent-based digital data in the field. They allow investigative teams to make real-time decisions while maintaining data privacy and integrity.

F **Cellebrite Frontline**

A mobile app that allows first responders to gather consent-based data quickly.

K **Cellebrite Kiosk**

A stand-alone solution that enables frontline teams to quickly extract and act on mobile data at specific locations, like police stations and border-control checkpoints.

CMS **Central Management System (CMS)**

Optimize device usage by managing and controlling all deployed devices and systems from a single point.

Cellebrite Training

Participants learn the digital forensic process and how to perform data extractions in the field and share them with other team members.

As the global leader in digital forensics solutions and trusted advisor to customers in over 150 countries, Cellebrite is the premiere provider for law enforcement, military, intelligence, and the private sector. Cellebrite offers the most complete, industry-proven range of solutions for the extraction, decoding, analysis, and collaboration of digital data.

Cellebrite's Digital Intelligence Platform is an integrated solution that offers unparalleled access to the largest assortment of digital devices and cloud data, and analysis solutions that minimize the need for manual review of digital data. The result is actionable intelligence that reduces the time needed to make the right decision.
